

C.I.T. SIZER

Model Number: ME-1SN-1625

PRODUCT DESCRIPTION

The C.I.T. Sizer was designed to perform a final sizing of the product before bagging. It removes small particles from the product, which are discharged into a dust container underneath the sizing screen. The rest of the product is then sent directly to an inspection table for quality assurance or directly to the product's container. All food contact surfaces are stainless steel except for the sizing screens which are zinc plated steel. These screens are easily removed and replaced. Stainless steel screens may be available upon request.
