

# BARREL DUMP

Model Number: ME-CLBD-55N

## PRODUCT DESCRIPTION

This is a must have if you handle your product in barrels. You can set your bins up in a line, and place a Barrel Dump on a track in front of them to dump product into each bin. This will be much less expensive than having an elevator for each bin. Our Barrel Dump has a robust mechanical mechanism for dumping a 55 gallon barrel of product. It can be stationary or on casters. The Barrel Dump has an integrated barrel retention system that keeps the barrel secure in the carriage during operation. Also, there is an integrated chain guard and carriage guard for user safety. The carriage guard has a door with a safety switch that disables the dump while loading the barrel. Another great feature of the Barrel Dump is the stainless steel basket. It has an integrated product catch to keep any product that might not dump out from going onto the floor.

## SPECIFICATIONS

Capacity: Pounds per hour the dump will give depends on the dump height. The basket moves at a rate of 47-1/2 ft/min.

Estimated Crated Weight: Depends upon the dump height.

Dimensions: Contact Modern Electronics & Equipment for overall dimensions.

## FEATURES

- Bearings are sealed maintenance free.
- Easy to operate. Frequency drive allows speed adjustment.
- Thick tube and channel construction for long life.
