

FEED HOPPER

Model Number: ME-FH-XXXX

PRODUCT DESCRIPTION

A feed hopper is simply a holding bin with an integrated tray that “feeds” the product out at an adjustable rate. Our feed hoppers come in a variety of sizes with a wide selection of options. The food contact surfaces are stainless steel, and all feed trays have an adjustable speed, and the throat of the hopper has an adjustable door to govern the amount of product flow. All feed hoppers’ discharge height are selected by the customer. They are easy to clean, and maintain. With virtually no moving parts, our feed hoppers will operate for years without any trouble.

SPECIFICATIONS

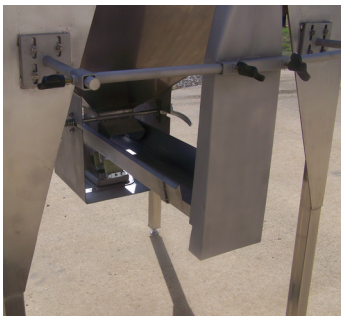

Capacity : depends on the model

Estimated Crated Weight : depends on the model

Dimensions : depends on the model
