

INLINE BALL DECK SIZER

Model Number: ME-ILBX-2836

PRODUCT DESCRIPTION

Our inline sizer was designed to size product with round hole screens. In many shelling operations, this machine is placed after a sheller to separate kernel and shell into separate containers. It can also be used to size shell-free kernel. This sizer can be used to feed blowers or aspirators for air leg separation of kernel and shell. We offer a 4, 5, 6, 7, and 8 screen version. The screen material is round hole perforated stainless steel. Neoprene rubber balls bouncing below the screen keep the screen holes free from obstruction. We offer these screens in a wide variety of different size holes. All food contact surfaces are stainless steel.

SPECIFICATIONS

Capacity : Approximately 2,400 lbs/hr

Estimated Crated Weight : Depends on model ordered

Dimensions : Depends on model ordered

FEATURES

- Screens, ball decks, and chutes are completely removable for easy cleaning and maintenance
